## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-13, drawn to methods of identification of mutations which utilize microarrays, classified in class 435, subclass 287.2.
  - II. Claims 14-15, drawn to methods of identification of mutations common among 5 individuals which utilize flow cytometry methods, classified in class 435, subclass 6.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are drawn to methods that have different objectives, different method steps, and utilize different reagents.

The methods of invention I are drawn to methods for identifying mutations in a target DNA sequence wherein a microarray that spans at least ten different whole genes is utilized.

The methods of invention II are drawn to the identification of mutations common among at least five individuals and recite steps in which samples from different individuals are specifically labeled and analyzed using flow cytometry methodologies. Although the methods are drawn to accomplish tasks in related area, that is mutation detection, the methods are considered unrelated

Art Unit: 1634

because they employ different methodologies and have different goals as set forth in their preambles and method steps.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as demonstrated by their different classification and recognized divergent subject matter and because inventions I-II require different searches that are not coextensive, examination of these claims would pose a serious burden on the examiner and therefore restriction for examination purposes as indicated is proper.
4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
